

RugDoctor[®]

Clean deeper. Feel better.

DIY CARPET & UPHOLSTERY CLEANING GUIDE

HOW TO SET UP THE RUG DOCTOR MACHINE

- 1** Pull down the black wire handle on the white recovery tank (Tank A), lift up the clear dome lid and pull out the white recovery tank.
 - 2** Fill the lower red tank (Tank B) with 9 litres of hot tap water and 2 capfuls of Rug Doctor Carpet Cleaner. Fill until the solution reaches halfway up the filter.

Every time you refill the lower red tank, empty the white recovery (Tank A) and clean out the filter under dome lid.

Ensure the thin solution hose at the back of the machine is connected to the brass connector. Plug the power cord directly into your power source. You are now ready to begin.
-

HOW TO DEEP CLEAN CARPET

- 3** Refer to the label on the top of the machine and switch the white button to 'carpet' setting. Then turn on the black vacuum button to start cleaning. The vacuum must be turned on throughout the cleaning process.
- 4** Press and hold the red button on the handle and walk backwards slowly to release solution onto the carpet. The machine must be flat against the carpet surface. At the end of your pass, release the red button to stop solution spray. Make a second pass over the wet area without pressing the red button to vacuum up excess solution. Ensure you do not over-saturate the carpet.
- 5** When water stops entering the clear dome or you have run out of water-solution remove the white recovery (Tank B). Empty the white recovery tank and then repeat Step 2 to refill and continue cleaning.

HOW TO CLEAN UPHOLSTERY

- 6 Add 4 capfuls of Britex Upholstery Cleaner and 9 litres of hot tap water into the lower red (Tank B). Fill until the solution reaches halfway up the filter.
- 7 At the back of the machine disconnect the thin solution hose by pulling down the brass connector. Then attach the solution hose from the upholstery wand to the brass connector on the machine.
- 8 At the back of the machine on the left side, pull up and out the grey vacuum hose. Then connect to the vacuum hose on the Upholstery Wand.
- 9 On the top of the machine switch the white button to 'Upholstery' setting. Then turn on the black vacuum button to start cleaning. The vacuum must be turned on throughout the cleaning process.
- 10 Begin cleaning by squeezing the hand lever on the Upholstery wand and pass over the area you wish to clean, working in sections. Ensure you do not over-saturate the upholstery.
- 11 Periodically release the lever and pass over the wet area to vacuum up the excess solution. Extra vacuum passes will speed up drying time.
- 12 When water stops spraying from the wand, take out the white recovery (Tank A), empty and repeat Step 6 to refill and continue cleaning upholstery. When you're finished cleaning, don't forget to empty the recovery tank (Tank A) and red tank (Tank B). Clean the machine thoroughly before returning it to the store.

WHEN YOU HAVE FINISHED CLEANING AND BEFORE YOU RETURN THE RUG DOCTOR PLEASE REMEMBER TO:

- To drain the red tank (Tank B), set the machine to "Carpet" and spray any remaining water over a floor drain or outdoors.
 - Alternatively, set the machine to "Tool" and spray out remaining water through the Upholstery Tool.
 - Remove the recovery tank (Tank A) and empty into sink or drain, rinse with clean water and leave to dry.
 - Wipe the exterior of the machine thoroughly.
